APPENDIX B: VB/I-70 OU2 SITE CONTACTS 15

1: Overview of Community Involvement Plan

The Environmental Protection Agency (EPA) developed this Community Involvement Plan (CIP) to facilitate two-way communication between the community and businesses surrounding the Vasquez Boulevard (VB/I-70) OU2 Superfund Site Operable Unit 2 (OU2) and EPA to encourage community involvement in Site activities. EPA will utilize the community involvement activities outlined in this plan to ensure that residents are continuously informed and provided opportunities to be involved.

This Community Involvement Plan addresses the Vasquez Boulevard/Interstate-70's relationship to the community and EPA (Section 2.0), provides the Site background (Section 3.0), presents the physical setting of the Site (Section 4.0), briefly outlines the nature and extent of the contamination (Section 5.0), provides the history of community involvement at the Site and (Section 6.0), and describes EPA's community involvement program at the Site. There are two appendices (Appendix A: EPA contacts and Appendix B: Site contacts). EPA drew upon several information sources to develop this plan, including community interviews, Site files (remedial investigation and the previous community involvement plan), and informal meetings and information sessions.

2: Site Overview

2.1: Site Background

On January 19, 1999, the Vasquez Boulevard & I-70 Site was proposed for the EPA Superfund National Priorities List (NPL), a ~~register~~ list of the most serious hazardous-waste sites in the country. Including the Site on the NPL assures EPA immediate access to cleanup funding through the Superfund program if industries fail to clean up the Site adequately. Listing also guarantees the public an opportunity to participate in cleanup decisions.

The VB/I-70 Site is an area of approximately four square miles located in north-central Denver. Historically, this area was a major smelting center for the Rocky Mountain West. Three smelting plants: Omaha-Grant, Argo, and Globe operated in the area for varying lengths of time, beginning as early as 1870, refining gold, silver, copper, lead and zinc.

In January 2010, EPA and the City and County of Denver (CCoD) completed a Remedial Investigation (RI) of OU2. The RI describes the type of contaminants found at the Site and identifies where they are located.

EPA, the Colorado Department of Public Health and Environment (CDPHE), and CCoD continue to work together to investigate potential heavy metal contamination in the soils, groundwater, surface water, and sediments at and adjacent to the Site. The Site is located approximately where the Denver Coliseum, Pepsi Bottling, and the Forney Transportation Museum stand today.

2.2: OU2 Site Area History

The Omaha & Grant Smelter got its start from the Grant Smelter located in Leadville, Colorado. The Grant Smelter operated in Leadville from 1878 until 1882 and was owned by the Grant Smelting Company (unincorporated). When the Grant Smelter was destroyed by fire in 1882, a replacement smelter was built in Denver. The Grant Smelter shipped bullion to the Omaha Smelting Works located in Omaha, Nebraska. On July 15, 1883 the Grant Smelter merged with the Omaha Smelting Works and on July 18, 1892 the corporation was renamed the Omaha & Grant Smelting and Refining Company.

In 1899, the Omaha & Grant Smelting and Refining Company joined other smelting companies to form the American Smelting and Refining Company. The American

Smelting and Refining Company continued to operate the Omaha & Grant Smelter until 1903. The American Smelting and Refining Company changed its name to ASARCO Incorporated (ASARCO) on May 15, 1975.

2.3: Facility Operations

The Omaha and Grant Smelter facility commenced operations at the Site in October 1882. In 1887, the facility was expanded. The facility was expanded again in 1892, in which a 352 foot tall smelter stack was built. The smelter operated for approximately 21 years and was closed in 1903.

The smelter buildings were subsequently demolished once the smelter operation was closed. Sometime later, all of the slag, with the exception of any residual slag that could be buried under modern parking lots, was removed. Based on historic aerial photographs, all of the visible slag was removed by 1949. Between 1920 and 1940, various portions of the facility were deeded to the CCoD. Other portions of the facility have been, and continue to be owned or operated by the Union Pacific Railroad, the Pepsi Bottling Company, and various other corporate entities or individuals.

The properties still owned and used by CCoD are the Globeville Landing Park and the Denver Coliseum, which opened in 1952. The CCoD constructed the Denver Stadium and Coliseum circa 1950 which encompassed part of the northeast portion of the former Omaha and Grant smelter facility. The approximately 10-acre Globeville Landing Park is located along the east side of the South Platte River. The park, constructed in the 1970's, encompassed part of the southwest portion of the former Omaha and Grant smelter facility.

2.4: Process Description

The Omaha & Grant Smelter facility employed a lead smelting process to produce gold, silver, copper, and lead. The smelting process involved the fusing of ore, fuel, and lime to form a melted product. As a result of this process, lead and silver would sink to the bottom of an iron chamber and the slag would float on the surface of the liquid metals.

2.5: Waste and Waste Disposal Practices

Although detailed information about the wastes from the smelting operations is not well documented, it is known that blast furnace slag was produced from the smelting operations. Ores, fuel, and flux were delivered by rail car directly to the furnace charging doors on the upper levels of the smelter. As the smelting operations proceeded, the intermediate products flowed downhill to a lower level. Smelter workers would run slag onto a dump and load bullion onto rail cars. An 1890 Sanborn Fire Insurance Map identifies a slag dump to the north of the Omaha & Grant Smelter property.

On December 15, 1936, CCoD announced plans to use the Omaha & Grant Smelter stack as a municipal incinerator, but use of the stack was not initiated at that time. On

November 18, 1944, CCoD revived the plan to use the Omaha & Grant Smelter stack as a city trash incinerator. Soon after trash incineration was started, Denver received complaints about the process including issues of safety. No record of trash incineration beyond January 12, 1945 has been noted. The largest smokestack associated with the Omaha & Grant Smelter was demolished by the City and County of Denver on February 22, 1950.

Prior to constructing the Coliseum and associated parking lot, portions of the Site were used as a landfill for disposal of municipal solid wastes. The presence of the landfill materials beneath the Coliseum parking lot area is evident by the undulating nature of the parking lot pavement owing to differential compaction and decomposition of the underlying solid waste materials. No specific information or documentation of the time periods when the landfill was in use could be located. Consequently, additional investigation of the nature, extent, and depth of the landfill materials was performed as part of field investigations for the Remedial Investigation of the Site.

3: Physical Setting

3.1: Topography

The Site topography is mainly flat, sloping gently toward the South Platte River, which is located along the western boundary of the Site. The Site is located on terraces above the modern day channel flood plain of the South Platte River.

Site elevations vary from 5,200 ft. above sea level along the northern boundary of the Site to approximately 5,140 ft within the flood plain of the South Platte River. The flood plain is flat with a slope of .25% to the northeast.

The surface of the primary terrace portion of the Site generally slopes toward the northwest toward the floodplain with a grade of 4%. The edge of the terrace drops off fairly steeply to the flood plain from about 5,170 ft, with a narrow bench at 5,150 ft. A second, higher terrace is located to the southeast beneath the Forney Transportation Museum property and the commercial properties along Brighton Boulevard.

4: Nature and Extent of Contamination

4.1: Draft Baseline Human Health and Screening Level of Ecological Risk Assessment

A Baseline Human Health and Screening Level of Ecological Risk Assessment for ~~OU2~~ of the VB/I-70 ~~OU2~~ Site was previously prepared ~~completed~~ by EPA (~~on~~ August, 2009). Based on the results of the draft risk assessment and a review of existing data, surface and subsurface soil were identified as the potential media of concern. Due to the limited occurrences of trace metals in groundwater and the lack of use of groundwater for domestic supply, groundwater was not found to be a media of concern. Arsenic and lead were identified as the potential chemicals of concern.

4.2: Soil

The occurrences of arsenic and lead at concentrations greater than background levels are localized and discontinuous. Sample results did not show broad areas of contamination but only isolated areas of arsenic and lead above background levels. Due to the presence of buildings and pavement that reduce erosion, windblown dust, or storm water runoff containing contaminants; significant transport and migration of the arsenic and lead occurrences from the soil is not expected to occur.

5: History of Community Involvement.

In 2005, a ~~community involvement plan~~ CIP was completed for the VB/I70 Site encompassing ~~the all~~ three operable units. This report will deal exclusively with the findings from OU2.

After a series of community interviews in 2005, it was found that respondents were mostly aware that EPA was doing some kind of environmental investigation in the area, but they had not received information about it in a long time and had limited knowledge regarding the project.

There was primarily interest in receiving information from EPA about how to expedite the environmental process for development, how to work with EPA while developing property, about the various cleanup programs/options available to redevelopers, and how businesses can be more environmentally sound. Though respondents expressed an interest in the forthcoming Remedial Investigation and Feasibility Study, it was to mainly help them decide about investing in future development.

Community Organizations

The **Elyria Swansea Business Association** meets monthly and periodically and sends out mailings to its members.

5.1: Planned EPA Activities

In the 2005 community involvement plan, EPA planned activities were developed. These activities are listed below.

- EPA will provide the community with regular updates about the project as significant actions occur.
- EPA will provide the community with contact information for related environmental cleanup programs available.
- EPA will update the community and community organizations and events when appropriate.

5.2: Previous Concerns Regarding Sampling and Cleanup Activities.

In the 2005 community involvement plan, there were concerns regarding the sampling and cleanup activities. These concerns are listed below.

- EPA may not be addressing all possible contamination in the area. EPA should consider past industrial and commercial uses that included a possible landfill. EPA may not be drilling enough wells to get a complete picture as groundwater flows in all different directions.
- EPA should expand the investigation because future development on and off Site will be impacted by contaminants the EPA does not address now.
- The EPA investigation could lead to on-site and off-site property owners being held liable
- EPA should consider sampling results already done by property owner through other projects.

Planned EPA activities in response to the above concerns are listed below

- EPA will revisit research done on past uses at the OU2 Site.
- EPA will consider adjusting the environmental investigation if warranted.
- EPA will continue to take future use into account at the OU2 Site.
- EPA will provide all concerned property owners with property issues and liability information.
- EPA will consider all information pertinent to the investigation.

5.3: Current Community Involvement.

In January 2010, a ~~draft~~ remedial investigation was ~~published~~ completed. At this time, EPA conducted community interviews with property and business owners located at and around the Site, as well as interviewed developers interested in the future of the Site. The questions and concerns from these interviews are listed below

- EPA should consider long term future use of the Site, and of the entire Brighton Blvd. corridor.
- EPA and the ~~City of Denver~~ C of Denver should consider that if the Site were cleaned up to or left at industrial commercial standards, that it could limit the potential growth and redevelopment of the Brighton Blvd. corridor.
- EPA may want to retest soil that had high arsenic or lead level readings to determine if they were an anomaly.
- EPA and the ~~City of Denver~~ C of Denver should consider the different interests between property owners, business owners, and developers, and how to appease the concerns of each party.
- EPA should clean the Site to what the original nature of the Site was, even before the Omaha and Grant Smelter were built. Or clean up the most affected areas completely i.e. to residential standards or to pre-industrial use of the Site.
- Individuals were concerned with who is liable for the cleanup, and who will pay for the clean up if it were to occur.
- Individuals were concerned about the potential risk of arsenic and lead. They were unsure of arsenic and lead levels that pose a threat.

- Any remedial action planned should not interfere with the National Western Stock Show.
- EPA should establish an information repository nearby, or publish documents on the VB/I70 EPA website.

5.4: Response to Community Concerns

- EPA will establish a nearby information repository, possibly at a nearby library. EPA will inform individuals once the information repository is established.
- EPA will provide a fact sheet regarding the OU2 Site, along with information about the potential contaminants in the area.
- EPA will continue to take future use into account at the OU2 Site.
- EPA will work with all interested parties during the proposed plan period to plan the most appropriate remedial action.
- EPA will work with the National Western Stock Show and CCoD when planning remedial action to ensure that the Stock Show will not be affected.
- EPA will consider all information pertinent to the Site investigation and remediation.
- EPA will hold public meetings when appropriate to listen to community concerns and provide updates on the Site.

6: EPA's Community Involvement Program

The overall goal of EPA's community involvement program is to promote two-way communication between citizens and the EPA and to provide opportunities for meaningful and active involvement by the community in the cleanup process. EPA will implement the community involvement activities described below. The following plan is based upon the results of community interviews described earlier.

Issue 1: Keeping the Public Informed and Up to Date

Activity 1A: Establish and Maintain Information Repositories

- **Objective:** To provide a convenient location where residents, landowners, and business owners can go to read and copy official documents and other pertinent information about the Site and EPA activities.
- **Method:** The repository is a reference collection of Site information containing the Administrative Record file, other site-specific information, the Community Involvement Plan, information about the Technical Assistance Grant program, and the general Superfund process. The Community Involvement Coordinator will work with a local contact to establish the local repository. This repository will be accessible to the physically challenged, will have copier facilities, and will be available to residents, business owners, and land owners during normal business hours.

Activity 1B: Provide Site and Superfund Information on the Internet

- **Objective:** To provide key resources for searching and listing both general and specific information about Superfund and hazardous waste issues.
- **Method:** A Site status summary for this Site can be found at <http://www.epa.gov/region8/superfund/co/vbi70/index.html>. Information about EPA and superfund can be found at EPA Headquarters: <http://www.epa.gov>. The Remedial Investigation, Feasibility Study, Proposed Plan and the Record of Decision (ROD) for the Site will be placed on the internet as they are completed.

Activity 1C: Establish and Maintain the Administrative Record

- **Objective:** To provide residents, landowners and business owners with a paper trail of all documents, resources, etc. used by the Remedial Project Manager and Site Team in reaching all decisions about the Site and its cleanup.
- **Method:** EPA will provide at least two sets of the Administrative Record for the Site, one in the EPA Region 8 office located at 1595 Wynkoop St. Denver,

CO 80202, and one located at the local Information Repository
(location/address?) -near the Site.

Issue 2: Provide Adequate and Meaningful Opportunities for Community Involvement.

Activity 2A: Hold Public Meetings

- **Objective:** To update the community on Site developments and address community questions, concerns, ideas, and comments.
- **Method:** EPA will schedule, prepare for, and attend all announced meetings. EPA will provide at least two weeks' notice of the scheduled meeting. Project Manager, Community Involvement Coordinator, and other appropriate EPA staff will attend.
- **Timing:** A public meeting is required during the Proposed Plan comment period. EPA will hold public meetings as appropriate.

Activity 2B: Encourage formation of Community Advisory Group (CAG)

- **Objective:** To provide citizens with a meaningful way to become actively involved, and to provide the Site team with a viable means of learning citizen concerns and attitudes.
- **Method:** EPA will encourage the formation of a CAG and provide support as appropriate to facilitate its formation. If formed, EPA will provide administrative support but will not be an active member.
- **Timing:** EPA will respond to any requests for help to form a CAG. As necessary, EPA will promote CAGs regularly throughout the Superfund process until one is formed.

Activity 2C: Solicit Comments During a Public Comment Period.

- **Objective:** To give community members an opportunity to review and comment on various EPA documents, especially the proposed plan. This provides the citizens with meaningful involvement in the process and also provides the Site Team with valuable information for use in making decisions.
- **Method:** EPA will announce each comment period separately. Announcements will appear in local newspapers and EPA fact sheets; they include particulars on duration, how to make comments, where to submit comments, etc.
- **Timing:** Comment periods will be announced as appropriate. A comment period is required in conjunction with the announcement of the proposed plan and will last a minimum of 30 days.

Activity 2D: Prepare and Issue a Responsiveness Summary

- **Objective:** To summarize comments received during comment periods, to document how the EPA has considered those comments during the decision making process, and to provide responses to major comments.
- **Method:** EPA will prepare a Responsiveness Summary as a section of the Record of Decision. The Responsiveness Summary will include four sections 1. Overview; 2. Background on Community Involvement; 3. Summary of

comments received and Agency responses; 4. Remedial Design/Remedial Action concerns. All information, both technical and nontechnical, will be conveyed in a manner that is easily understood.

- **Timing:** EPA will issue the Responsiveness Summary as part of the Record of Decision.

Activity 2E: Revise the Community Involvement Plan (CIP).

- **Objective:** To identify and address community needs, issues, or concerns regarding the Site or the cleanup remedy that are not currently addressed in this CIP.
- **Method:** The revised CIP will update the information presented in the previous version of the CIP
- **Timing:** EPA will revise the CIP as community concern warrants or at least every three years until the Site is closed.
